1 Disposal

AIRTECH EUROPE products are made of high-quality components and valuable materials. Therefore, have faulty or defective appliances checked to see if they can be repaired and reused. If repair and reuse is not possible, observe the following disposal notes.

2.1 Disposal according to German law

- The components are marked with the crossed-out waste bin according to the “Electrical and Electronic Equipment Directive – ElektroG3” (dated 20 May 2021, valid from 1 January 2022).

- The appliances must therefore not be disposed of as unsorted municipal waste, but must be collected separately and handed to a WEEE (Waste of Electrical and Electronic Equipment) registered collection point.
- The components do not contain any electrochemical cells, batteries or accumulators, which must be separated and disposed of separately.
- In Germany, NORD components can be handed in at the headquarters of AIRTECH EUROPE GmbH.

WEEE-Reg. No.	**Name of the manufacturer / authorized representative**	**Category**	**Appliance type**
DE 70658898	AIRTECH Europe GmbH	Appliances where none of the outer dimensions exceeds 50 cm (small appliances)	Small appliances for exclusive use in other than private households
